Terri:

My understanding is that the company was responding to items in a WVDEP order and found information that noted the 2nd chemical. As to why they did not check earlier, I would be speculating.

Ok.

Fran: did the company explain to WV and/or water company why they failed to mention sooner?

Mark: have you heard why?

Terri – got this followup question from NPR on voice mail and email. I wasn't at the company meeting where this was disclosed so perhaps Fran and HSCD could provide a written response that we send along.

Jon, I forgot to ask did the company tell EPA why it failed to tell you about the 2nd chemical PPH earlier?
